

Nitrogen fertilizer industry in transformation

“Two decades in review and journey ahead”

Dr Dimitrios Dimitriou

Senior Business Advisor Middle East
Energy & Chemicals Advisory

Megatrends and Fertilizers

There are five major socio-economic driving forces

- Rapid urbanisation
- Climate change and resource scarcity
- Shift in global economic power
- Demographic and social change
- Technological breakthroughs

Combined population and GDP growth fertilizer consumption growing ~10 times since 1960's

FERTILIZERS

Implications for the fertilizer industry

Fertilizer industry:

1. Urbanization results in less land available for agriculture.
2. Production of energy using hydrocarbons directly competes with producing hydrogen/nitrogen based fertilizers. A change in energy policy might free-up reserves for fertilizer production?
3. A growing population driven by birth rates and aging dramatically increases overall demand for food.
4. Demand for (higher quality) food increases dramatically with population rich countries (China and India) becoming more wealthy (increase in GDP per capita).
5. Digital technology solutions are appearing to help farmers increase efficiencies which may push down demand (e.g. digital soil mapping, precise agriculture, accurate weather forecast etc.)
6. Environmental implications of fertilizers production and use drive regulation and fertilizer production (eg. green ammonia) and crop technology (eg. nitrogen fixation)

The journey

Industrial nitrogen production has increased 85 times since WWII

Timeline of ammonia industry development

First ammonia synthesis commercial plant

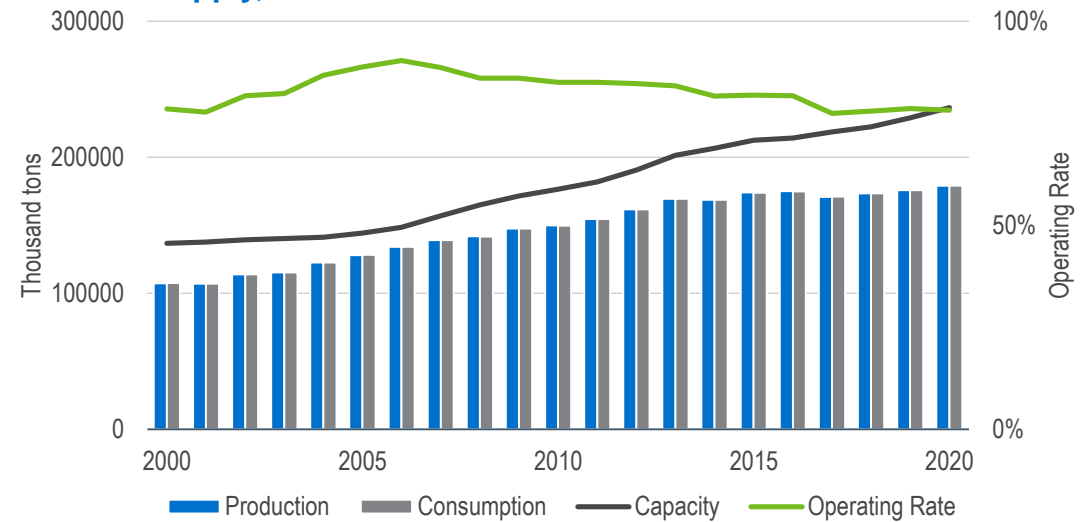

From 1 plant in 1913 to >1000 ammonia and urea plants in 2018

1910 0.35 million tons	1913 <1 million tons 2% Haber Bosch	1934 2 million tons 64% Haber Bosch	1946 3 million tons	2010 165 million tons	2018 251 million tons >99% Haber Bosch

Some key trends over past decades – Global

Supply, Demand and trade Urea

Historic Prices vs Oil

World Trade Urea

Some outcomes of overuse

Some key trends in China

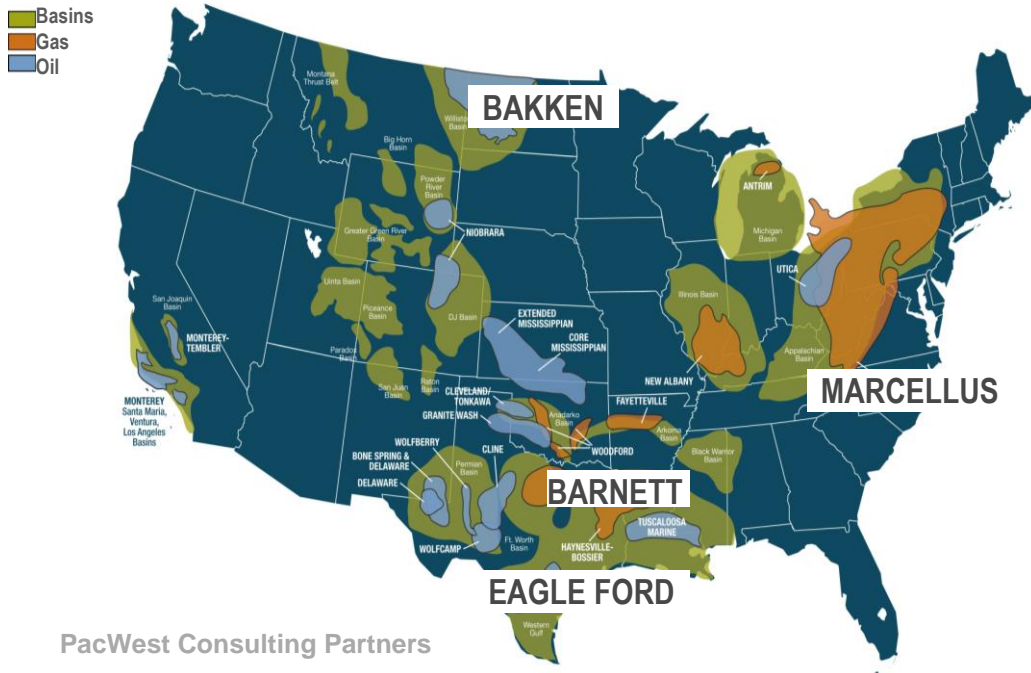

Supply, Demand and Trade Urea, China

Supply, Demand and Trade Urea, India

Some key trends in North America

Supply, Demand and Trade Urea

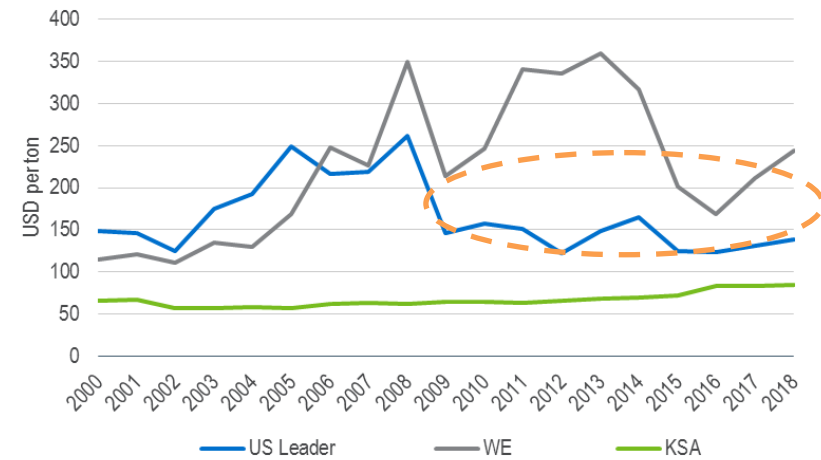

PacWest Consulting Partners

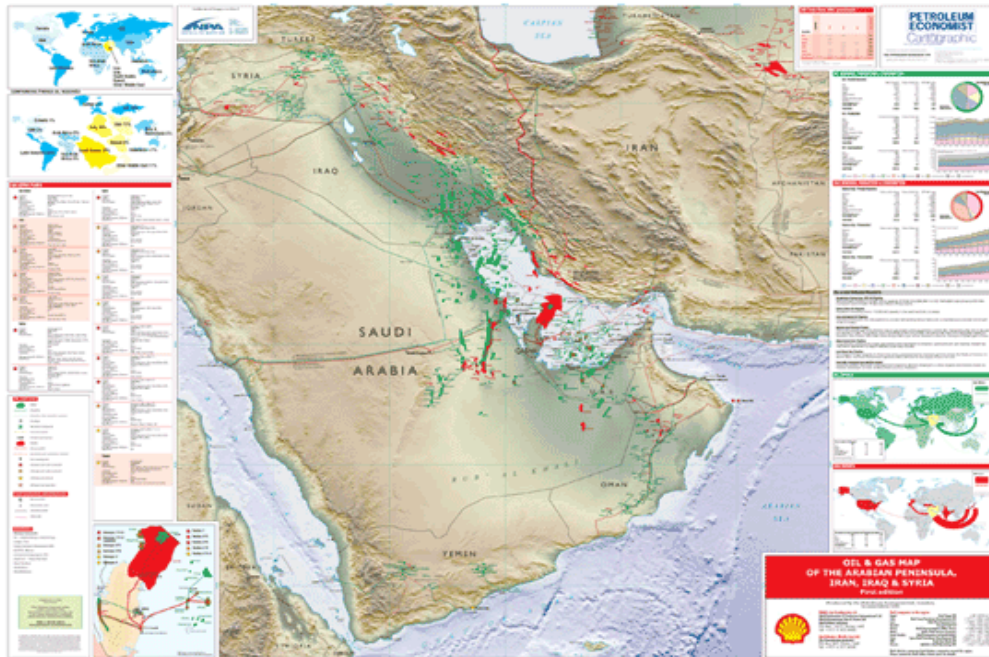

Natural Gas prices vs Oil

Cash Cost Margins Development

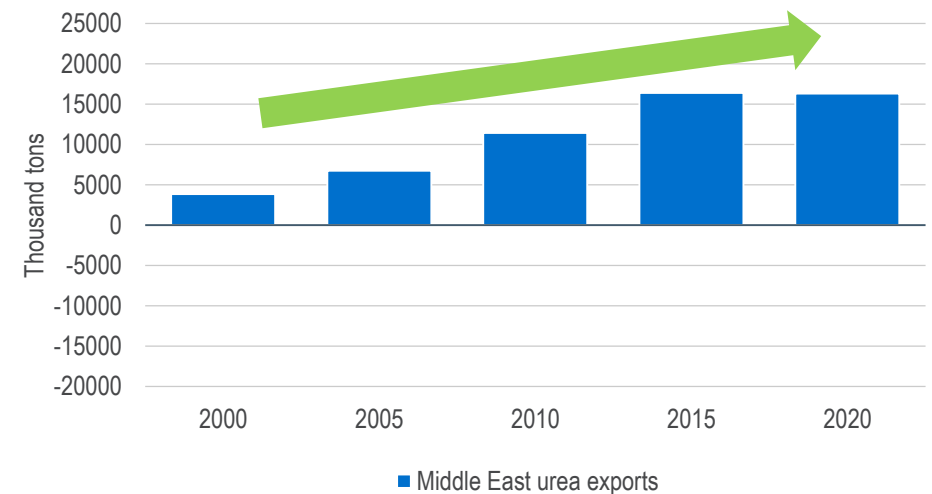

Some key trends in the Middle East

Supply, Demand and Trade Urea

Urea Trade from Middle East

Cash Cost Margins Development

Some key trends over past decades –New applications

Biodiesel Demand by region

DEF Demand by region

Some key trends over past decades –New products

4 million tons in 2017
(growing at >5% CAGR)

Nexant views - past

- Fertilizer overuse and environmental impact!
- Shale gas development and significant decoupling of natural gas prices in the US from crude oil
- Competitiveness position of US producers improved significantly
- Producers in KSA enjoy a strong advantage on a cash cost basis due to low gas cost, but limited gas resource for new projects and threat from other exporters rising
- China become a large net exporter of urea threatening global market – net exports recently declined; supply and demand side reforms.
- India and SEA main importing markets
- Africa in focus: under application, large resources and population growth
- From a buoyant market in until mid 2010's to an oversupplied market today

The road ahead?

Some key trends to follow?

 nutrient stewardship

CONSOLIDATE

Nexant views - future

- Consistent long term growth due to rising population but at lower rates due to fertilizer over-application, regulation and nutrient stewardship in major consuming markets
- New products/new markets and new strategies for players in effort to create and capture value
- Digitalisation impacting demand and supply?
- India emerging as a key producer?
- China further capacity rationalisation, growing environmental drive and lower exports;
- Middle East continued position as low cost, volume exporter but competitive threat rising; need for new business strategies!
- Protectionism impacting market - Government changes can lead to trade tensions
- Policy developments are a major driver of future fertilizer supply and demand
 - China, fertilizer consumption growth has been capped and supply decreasing
 - India, the government is considering options to improve the effectiveness of its fertilizer subsidy scheme and become self sufficient
- Africa emerging a major consuming and producing centre?
